(54) RADAR

(57) Abstract:

PROBLEM TO BE SOLVED: To provide a radar of which the time-varying characteristics of a voltage signal for modulating frequencies is adjusted not only at shipping from a factory but also in an actual state of use after the shipping.

SOLUTION: When the time-varying characteristics of the voltage signal for modulating frequencies are adjusted to a voltage controlled oscillator for determining a transmitting frequency, the time varying characteristics of the voltage signal for modulating frequencies is changed by a minute amount, the frequency spectrum of a beat signal is acquired, and the adjustment is performed in such a way that the shape of a protrusion of signal intensity contained in the frequency spectrum becomes the sharpest.

LEGAL STATUS

[Date of request for examination] 11. 09. 2003

[Date of sending the examiner's decision of rejection] 16. 08. 2005

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision]

of rejection]

[Date of requesting appeal against examiner's
decision of rejection]

[Date of extinction of right]
